Joyce,

Everyone will be on site at 8 Am and start soon there after the safety meeting etc. Please let me know if you have any questions.

Thanks TJK

Joyce,

Again I apologize for the miscommunications as I obviously misunderstood our discussions. In any event, we have ceased sampling and would like to resume stockpile sampling tomorrow if this timing is acceptable to you. Please let me know and we will coordinate schedules. Nevertheless, I will forward you all of our sampling notes from our sampling conducted in the excavations. I will be happy to discuss any questions you may have. Please let me know if you will consider the sampling described in our notes representative of the excavation bottom and we will have this material analyzed. If not we will reschedule sampling in the excavations.

We just received the newer final survey data and it is being digitized for map production. Upon review I will forward as soon as possible.

I apologize for any miscommunication.

TJK

Subject: Neuhauser LF: Sampling of Phase 1

Dear Tom - late last week, EPA learned from ACTEnviro/PSC that Geosyntec intended to conduct further sampling in the Phase 1 area. This information should have been provided to EPA by you as the designated Project Coordinator. On Friday, March 2nd, you and I had a meeting on site. When I asked you about the sampling, you said it might happen on the following Monday or Tuesday, March 5 or 6. I stated that I would be in mandatory training but that I wanted EPA's contractor to be present for the sampling. I stated that the sampling should therefore be scheduled so that the EPA contractor be present. You said you would let me know regarding the schedule.

I heard nothing further regarding the schedule for sampling. If the sampling is or was already conducted without EPA's oversight, the data collected by the laboratory analysis of the samples may be of limited value in any decision making for the site.

There has been little documentation to date for samples taken, locations, mapping, etc. No updated sampling identification log has been provided, despite being requested by EPA.

Subject: RE: Sampling

Joyce,

I had thought that I had given notice as such by our discussions. I apologize and will make sure we are clearer in the notice. We are looking at sampling Phase I bottom and stockpiles with discrete sampling of known hot locations in the base of Phase I and additional discrete sampling of the stockpiles at greater depths in additional locations. 4 samples from the larger stock piles and three from the smaller ones. 4 test pits in the base of Phase I with 3 to 4 samples from each test pit or as needed based on PID readings.

Please let me know if you would like additional sampling conducted or if you have any questions.

Thanks TJK

Subject: Sampling

Hi Tom - just a reminder from our site meeting last Friday March 2nd that advance notice for sampling needs to be provided to EPA if the data is proposed for use in decision making, e.g., the Phase 1 excavation.

Joyce
